

SAS Project Implementation

SAS Project Practicum

Students will have the opportunity to apply the knowledge and skills from the beginner and advanced SAS classes to three complex practical assignments that simulate real-world projects from fields such as healthcare, insurance, and industrial marketing.

Detailed review lectures and briefings will be provided prior to the start of each major assignment. Students will be given ample time to work on the assignments.

Assistance and additional resources will be available. A debriefing will be done upon the conclusion of each project to ensure that the students fully understand all topics covered by the assignment and will be able to convert the accumulated knowledge, skills, experience to a successful career in SAS.
